Objective

I am a TY Btech engineering student seeking a position at your company as a cybersecurity engineering intern where I can contribute using my skills and learn from every aspect of the process.

Skills

Python, C, C++, Red Hat Linux, MongoDB, MySQL, API Testing, and Web App Penetration.

Experience

Hackerone / Bug Bounty Hunter

JAN 2022 - PRESENT

Testing on websites of various companies which approach the platform in order to secure the web. I have also worked on a number of private invitations.

Projects

Subdomain Enumerator and Port Scanner

FEB 2022 - MAR 2022

This project is based on pinging every single subdomain of the website and returns the list of all valid subdomains, also it tackles the issue of port scanning particular subdomain from the list itself if we just click on it.

Entertainment recommendation systems using emotion detection based on facial, speech, and text factors

AUG 2022 - PRESENT

The project is based on image processing, audio manipulation, and NLP where the user interacts with the program and it responds with a suitable option of entertainment.

Trading Bot

AUG 2020 - JUN 2021

Here I and my team developed an algorithm that was able to trade stocks or their options on its own without any hindrance from the owner.
